

Business Requirement Document (BRD)

Project Name

CaryanamIndia – Car Loan Marketplace Platform

Document Version

1.0

Prepared By

CaryanamIndia Product Team

Date

March 2026

1. Introduction

1.1 Purpose

The purpose of this document is to define the business requirements for the **CaryanamIndia Car Finance Platform**, a digital platform that allows users to apply for car loans and connect with multiple partner banks.

The system will enable:

- Users to apply for car loans online
- Partner banks to review loan applications
- Admin to manage the entire platform

The platform will act as a **loan marketplace connecting borrowers with multiple financial institutions**.

2. Project Overview

CaryanamIndia is a **car loan aggregator platform** that simplifies the process of applying for a car loan.

Instead of applying to multiple banks individually, users can:

1. Apply once
2. Upload required documents
3. Banks review the application
4. Banks provide loan offers

Users can then **select the best loan offer**.

3. Objectives

The main objectives of the platform are:

- Simplify car loan applications
 - Connect multiple banks with borrowers
 - Reduce loan approval time
 - Provide transparent loan comparisons
 - Digitize document verification
-

4. Stakeholders

Stakeholder	Role
Admin	Platform management
Users	Apply for car loans
Banks	Evaluate and approve loans
Bank Executives	Process loan applications
Technical Team	Develop and maintain platform

5. System Users

The platform will support **three main user roles**.

1. Admin

Platform controller who manages users and banks.

2. Bank

Partner financial institutions reviewing applications.

3. User

Customer applying for car loans.

6. System Architecture (High Level)

The platform will include the following major modules:

1. User Management
 2. Loan Application Management
 3. Document Upload System
 4. Bank Review Dashboard
 5. Admin Control Panel
 6. Notification System
 7. Loan Offer Management
 8. Status Tracking
-

7. User Roles and Permissions

7.1 Admin

Admin has full control over the system.

Admin Features

- Manage banks
- Approve bank registrations
- Manage users
- View all loan applications
- Monitor loan processing
- Manage document types
- Track analytics
- Manage system settings

Admin Dashboard

Admin can view:

- Total applications
 - Approved loans
 - Pending loans
 - Partner banks
 - System activity
-

7.2 User (Loan Applicant)

Users are individuals who want to apply for car loans.

User Features

Users can:

- Register/Login
 - Create loan application
 - Upload documents
 - View loan status
 - Compare bank offers
 - Select preferred bank
 - Track application progress
-

User Registration Information

Users must provide:

- Full Name
 - Mobile Number
 - Email
 - Address
 - PAN Card
 - Aadhaar Number
 - Employment Type
 - Monthly Income
-

Loan Application Details

User will provide:

- Car Type (New / Used)
 - Car Model
 - Car Price
 - Down Payment
 - Loan Amount
 - Loan Tenure
-

Documents Uploaded by User

User must upload:

- Aadhaar Card
 - PAN Card
 - Salary Slips (3 months)
 - Bank Statements
 - Address Proof
 - Car Quotation
 - Photograph
-

8. Bank Portal

Banks will have a **separate login dashboard**.

Bank Features

Banks can:

- Login securely
 - View loan applications
 - Access uploaded documents
 - Review applicant profile
 - Accept or reject application
 - Send loan offer
-

Bank Executive Workflow

1. Login to bank dashboard
 2. View new loan applications
 3. Check uploaded documents
 4. Perform credit evaluation
 5. Update application status
 6. Send loan offer
-

Bank Decision Options

Bank executives can mark application status:

- Pending
 - Under Review
 - Documents Required
 - Approved
 - Rejected
-

9. Loan Offer System

When a bank approves the loan, they will provide:

- Loan Amount Approved
- Interest Rate
- Processing Fee
- EMI Amount
- Loan Tenure
- Additional conditions

Users can **compare offers from multiple banks**.

10. User Offer Comparison

Users can see:

Bank Interest Rate EMI Processing Fee Approval Status

Users can **select the best offer**.

Once selected:

- The application moves to **final processing stage**.
-

11. Application Tracking

Users can track loan progress.

Status Flow

Application Created
↓
Documents Uploaded
↓
Shared with Banks
↓
Bank Review
↓
Loan Offers Received
↓
User Selects Bank
↓
Loan Approved
↓
Loan Disbursed

12. Document Management System

The platform will support secure document storage.

Features:

- Encrypted document storage
 - Bank access control
 - User upload history
 - Document verification status
-

13. Notifications

System notifications will be sent through:

- Email
- SMS
- In-App Notifications

Events triggering notifications:

- Loan application submitted
 - Bank request for documents
 - Loan approval
 - Loan rejection
 - Loan offer received
-

14. Security Requirements

The platform must include:

- Secure login authentication
 - Role-based access control
 - Encrypted document storage
 - Secure APIs
 - Audit logs
-

15. Non Functional Requirements

Performance

System must support **10,000+ users simultaneously**.

Availability

System uptime must be **99.9%**.

Security

Sensitive user data must be encrypted.

Scalability

The platform must support onboarding of **100+ partner banks**.

16. Technology Stack (Suggested)

Backend

- Java
- Spring Boot
- Microservices

Frontend

- React / Angular

Database

- PostgreSQL / MySQL

Cloud

- AWS / Azure

Document Storage

- AWS S3

Authentication

- JWT / OAuth2
-

17. Reports & Analytics

Admin should be able to generate reports:

- Loan applications per month
- Bank approval rate
- Loan disbursement statistics
- User registrations

18. Future Enhancements

Future features may include:

- AI loan eligibility prediction
- Credit score integration
- Car marketplace integration
- Instant loan approval
- Mobile application

19. Success Metrics

The success of the platform will be measured by:

- Number of loan applications
- Bank participation
- Loan approval rate
- User satisfaction
